

The Watch

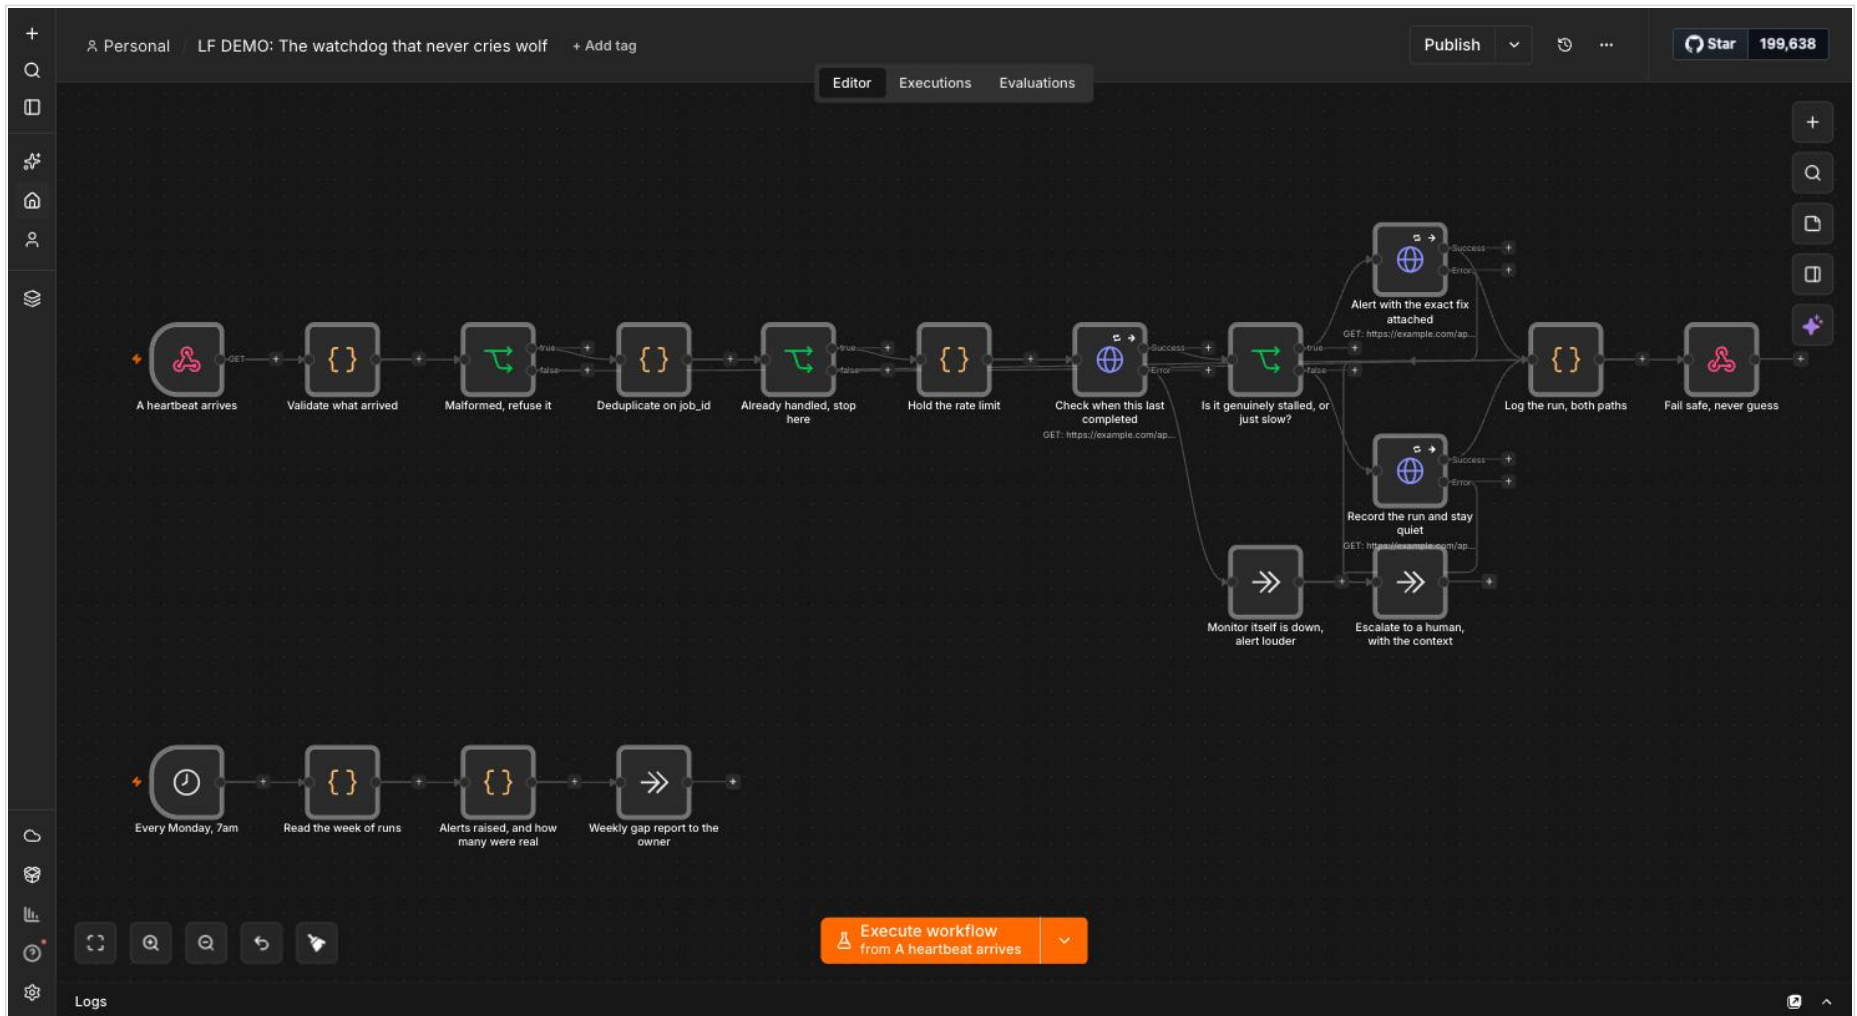

alerting · built in zapier

Something breaks silently and the business hears it from a customer. That's the most expensive way to find out.

What it connects to: The thing that breaks and the thing that tells you are never the same system, and the watchdog must not depend on the system it is watching.

1 of 4 SYSTEM

Here's the watchdog, with the exact fix carried inside the alert rather than just the symptom.

2 of 4 THINKING

It's tested against a planted failure before it ever watches anything real — an alert nobody trusts gets muted.

The screenshot shows a workflow editor with a central node configuration panel and two side panels for input and output data.

Node Title: Is it genuinely stalled, or just slow?

Configuration Panel:

- Parameters:** Contains a "Conditions" section with a single condition: `{{ $json.stalled === true && $json.minutesSince > $json.threshold }}`. A checkbox labeled "is true" is checked. Below the condition is a "+ Add condition" button.
- Settings:** Contains a toggle switch for "Convert types where required" which is currently turned off.
- Options:** Contains a "+ Add option" button.
- Buttons:** An orange "Execute step" button is located at the top right of the configuration panel.

INPUT Panel:

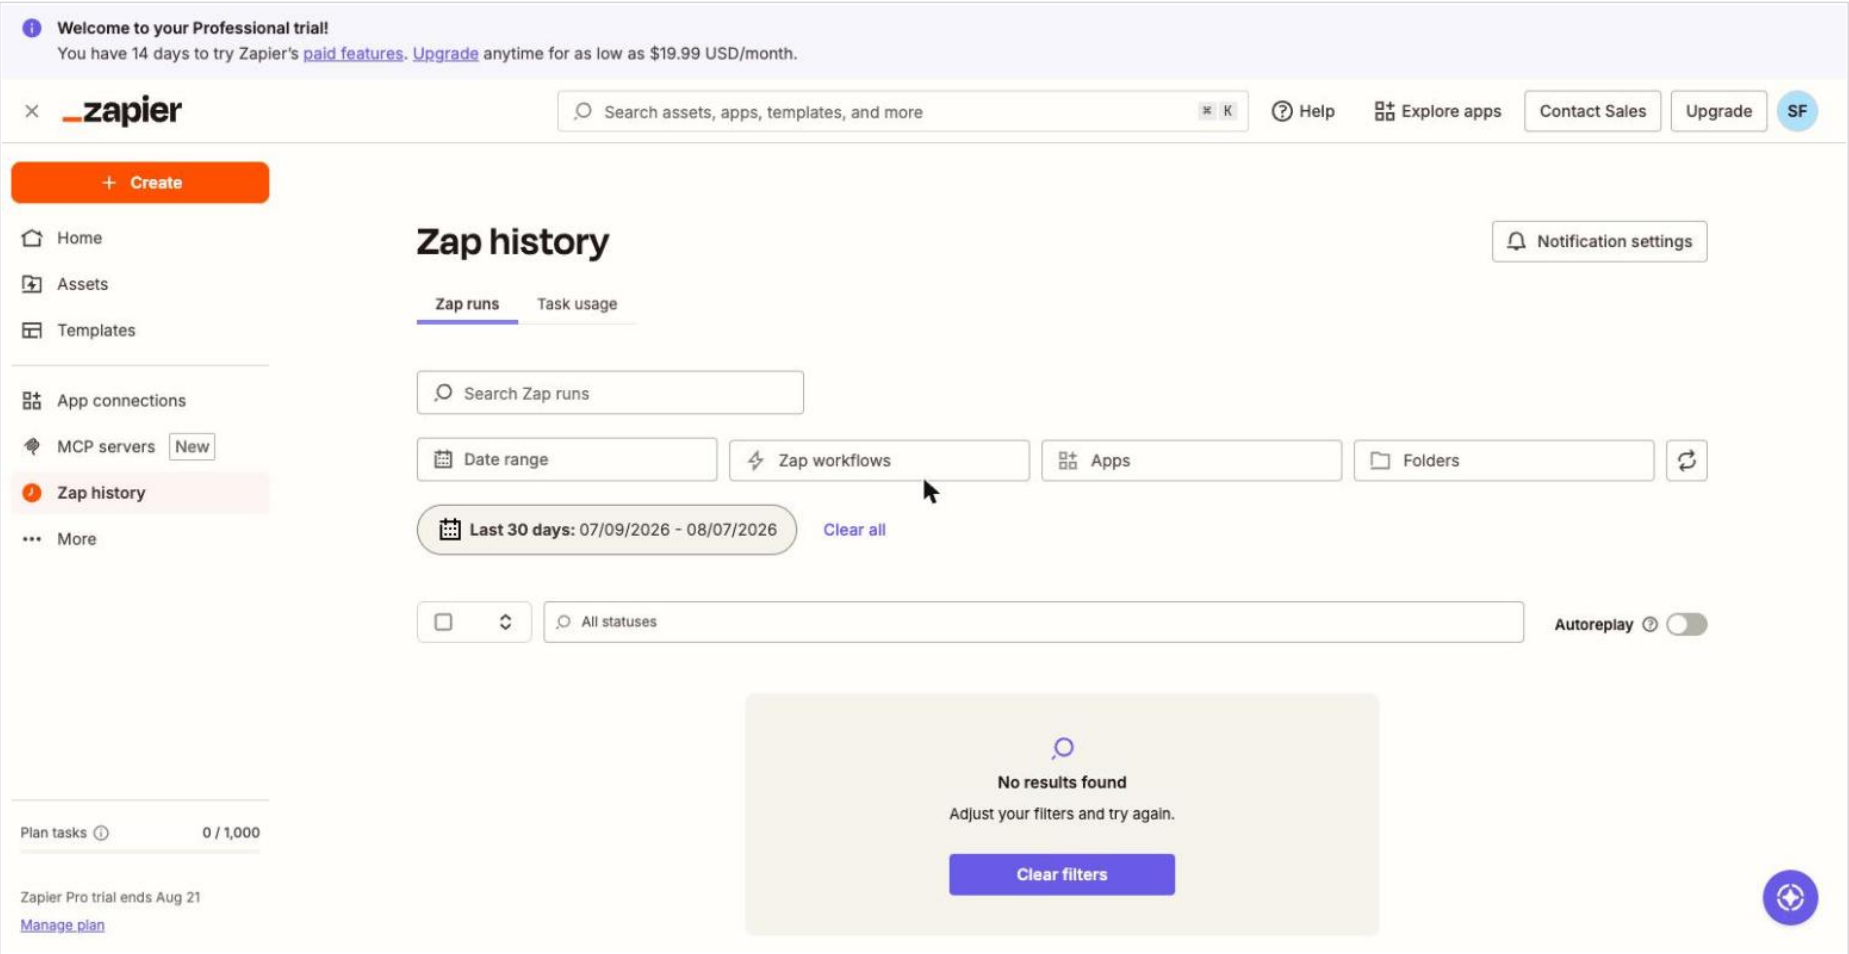

- Displays "No input data" with a right-pointing arrow icon.
- Contains a button labeled "Execute previous nodes" and the text "to view input data".

OUTPUT Panel:

- Displays "No output data" with a left-pointing arrow icon.
- Contains a button labeled "Execute step" and the text "to view output data".

Footer: A "Logs" tab is visible at the bottom left. A feedback prompt at the bottom center reads "I wish this node would...".

The alerting path in the CRM, escalating with context.

4 of 4 MORE

And the precision check: how many alerts were actually real.
