

The Onboarding Build

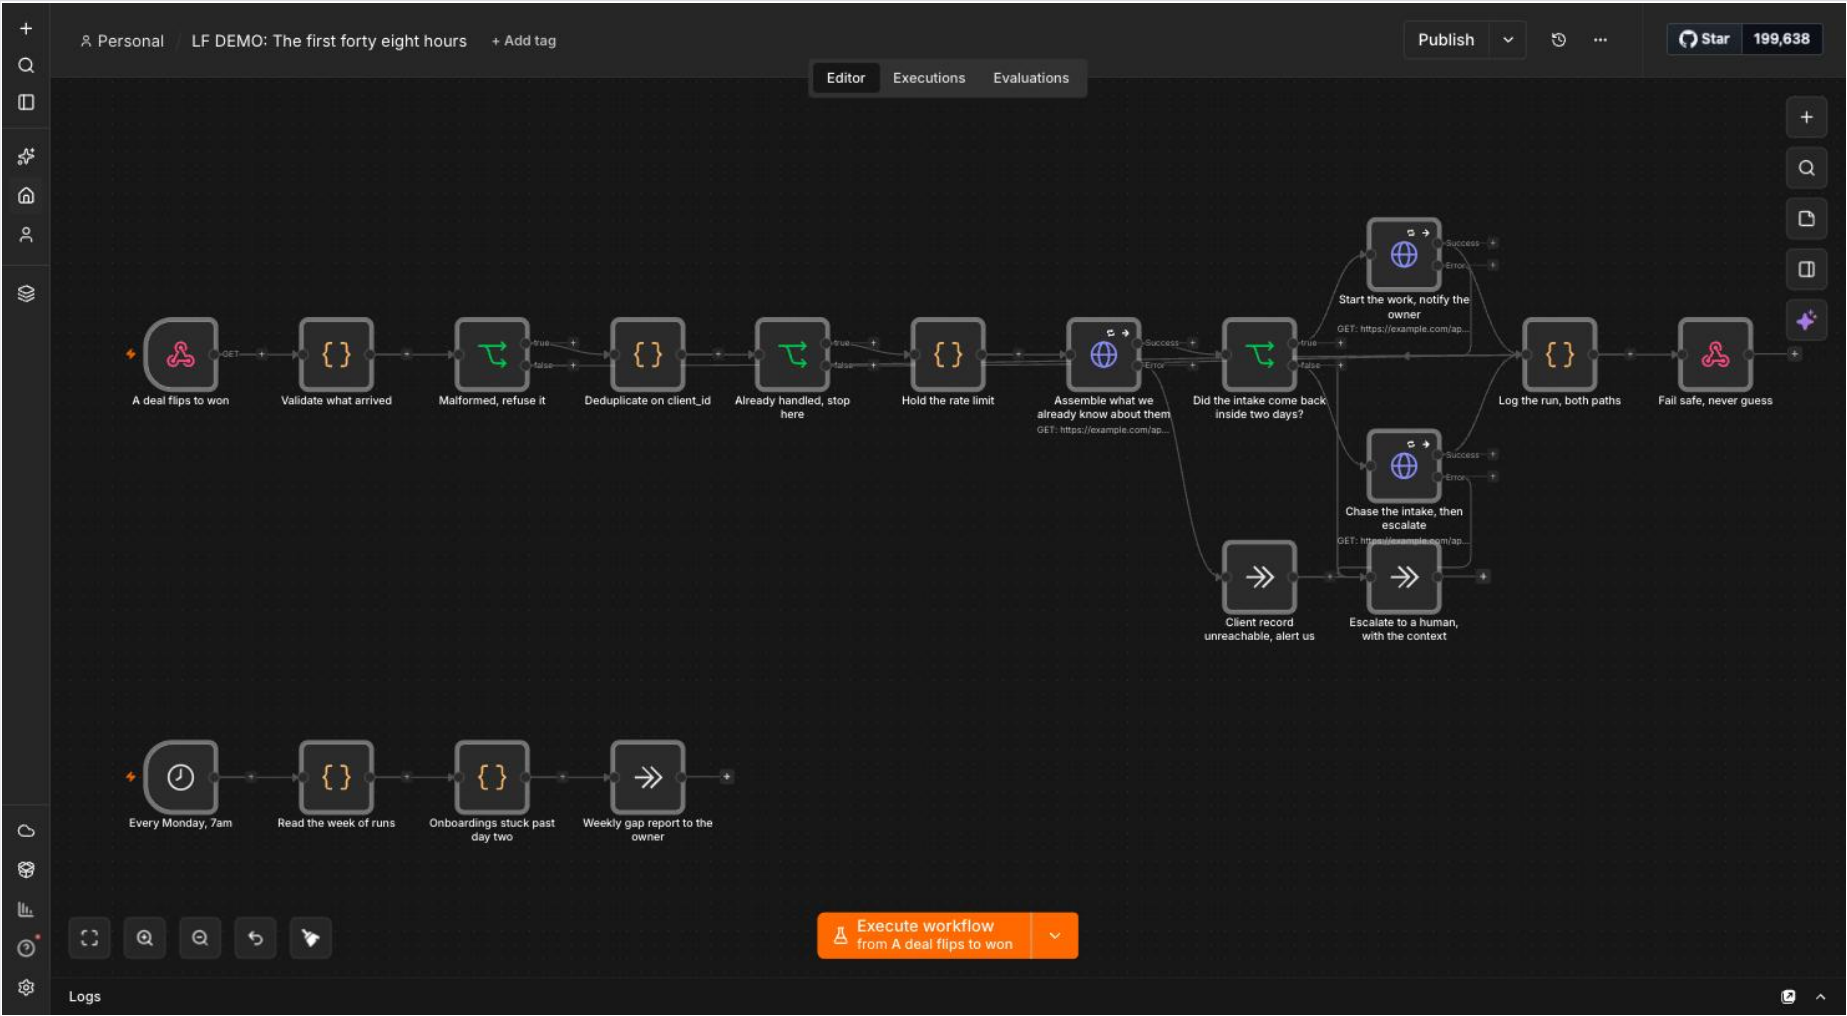

client-onboarding · built in ghl

The first 48 hours set the tone for the whole engagement, and they're usually improvised.

What it connects to: Won in the CRM has to become tasks in the project tool, a folder somewhere, and an intake the client actually returns. Three systems, one moment.

1 of 4 SYSTEM

Here's what fires the moment a deal flips to Won — welcome, checklist, intake, escalation.

2 of 4 THINKING

It escalates if the intake hasn't come back by day two, rather than waiting for someone to notice.

The screenshot displays a workflow editor with a central configuration panel and two side panels labeled 'INPUT' and 'OUTPUT'.

Central Panel:

- Title:** Did the intake come back inside two days?
- Tabs:** Parameters (selected), Settings
- Execute step:** An orange button with a warning icon.
- Conditions:**
 - Expression: `{{ $json.intakeReturned === true && $json.n.dayCount <= 2 }}`
 - Dropdown: is true
 - + Add condition
- Options:**
 - Convert types where required: ☐
 - + Add option
- Footer:** ? I wish this node would...

INPUT Panel:

- Icon: →|
- Text: No input data
- Button: Execute previous nodes
- Text: to view input data

OUTPUT Panel:

- Icon: |→
- Text: No output data
- Button: Execute step
- Text: to view output data

Bottom Bar: Logs

Running in the CRM, triggered on the status change rather than a stage drag.
