

The Lead Router

lead-routing · built in activecampaign

Five minutes is the whole game. A lead that waits an hour is worth a fraction of one answered fast.

What it connects to: The form is in one system, the owner roster in another, and the SLA clock in neither. The clock is the integration.

1 of 4 SYSTEM

Here's the routing system end to end — score, assign, contact, and escalate on silence.

2 of 4 THINKING

The part most builds miss is the SLA timer: this reassigns when the first owner doesn't touch it.

Is this one worth the fast lane?

Same pattern running inside a real CRM, with the merge fields and the branch on lead source.

And the segmentation behind it, so the right leads reach the right closer.
