

The Sync Build

system-sync · built in quickbooks

Two systems disagreeing about the same customer is how a CRM quietly stops being trusted.

What it connects to: This pattern IS the seam. Two systems, one record, and an echo gate so our own write coming back does not start a loop at 3am.

1 of 4 SYSTEM

Here's the two-way sync, with the echo gate that stops it looping at 3am.

2 of 4 THINKING

This is the node that checks whether the change coming back is our own write. Most builds are missing it.

 Is this our own echo coming back?
