

The Onboarding Build

client-onboarding · built in airtable

The first 48 hours set the tone for the whole engagement, and they're usually improvised.

What it connects to: Won in the CRM has to become tasks in the project tool, a folder somewhere, and an intake the client actually returns. Three systems, one moment.

1 of 4 SYSTEM

Here's what fires the moment a deal flips to Won — welcome, checklist, intake, escalation.

2 of 4 THINKING

It escalates if the intake hasn't come back by day two, rather than waiting for someone to notice.

The screenshot displays a workflow editor with a central configuration panel and two side panels labeled INPUT and OUTPUT.

Central Panel:

- Title:** Did the intake come back inside two days?
- Parameters / Settings:** A tabbed interface with 'Parameters' selected.
- Conditions:** A section containing a single condition: `{{ $json.intakeReturned === true && $json.n.dayCount <= 2 }}`. A dropdown menu next to it shows 'is true'.
- Buttons:** '+ Add condition' and '+ Add option'.
- Options:** A section with a toggle switch labeled 'Convert types where required' (currently off).
- Footer:** A button labeled 'Execute step'.

INPUT Panel:

- Header:** INPUT
- Content:** A message 'No input data' with a button 'Execute previous nodes' and the text 'to view input data'.

OUTPUT Panel:

- Header:** OUTPUT
- Content:** A message 'No output data' with a button 'Execute step' and the text 'to view output data'.

Footer: A 'Logs' tab is visible at the bottom left. A small icon and text 'I wish this node would...' are at the bottom center.

3 of 4 THEIR-WORLD

Running in the CRM, triggered on the status change rather than a stage drag.

4 of 4 MORE

And the onboarding assets it assembles.
