

The Intake System

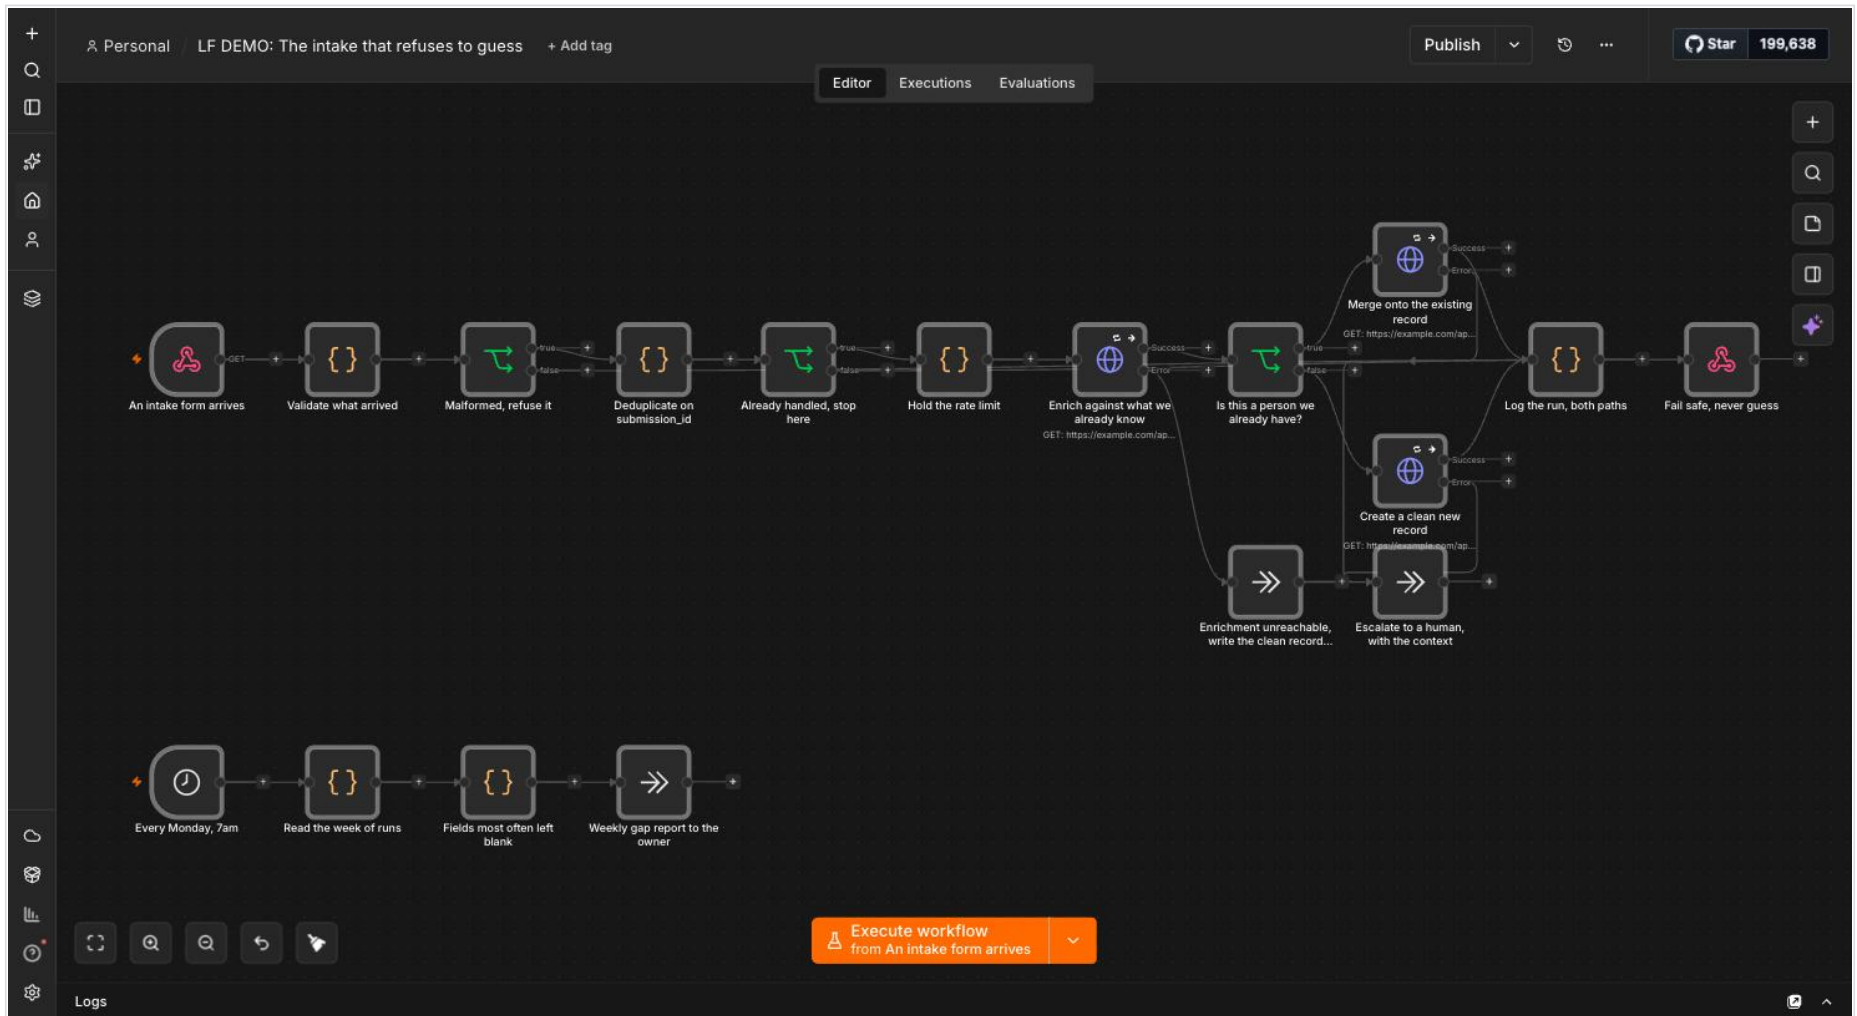

data-collection · built in ghl

A half-record in the CRM is worse than no record, because it looks complete.

What it connects to: The form and the system of record are almost never the same tool. Everything expensive happens in the gap: duplicates, half-records, and fields that mean different things on each side.

1 of 4 SYSTEM

Here's the intake spine: validate, refuse what's malformed, dedupe, then write a clean record.

2 of 4 THINKING

The validation gate is the part that matters — it refuses rather than guessing.

The screenshot displays the Node-RED web interface with a validation node titled "Is this a person we already have?". The interface is divided into three main sections: INPUT, CONFIGURATION, and OUTPUT.

- INPUT:** Shows "No input data" and a button "Execute previous nodes" to view input data.
- CONFIGURATION:** Contains tabs for "Parameters" and "Settings".
 - Parameters:** Features a "Conditions" section with a JavaScript expression: `{{ $json.existing === true && $json.confidence > 0.8 }}`. A dropdown menu next to it is set to "is true". Below this is a "+ Add condition" button.
 - Settings:** Includes a toggle switch for "Convert types where required" which is currently turned off. Below it is an "Options" section with a "+ Add option" button.
 - An orange "Execute step" button is located at the top right of the configuration panel.
- OUTPUT:** Shows "No output data" and a button "Execute step" to view output data.

At the bottom of the interface, there is a "Logs" tab and a suggestion icon with the text "I wish this node would...".

The intake form itself, with real field types bound to CRM properties.
