

The Deliverability Build

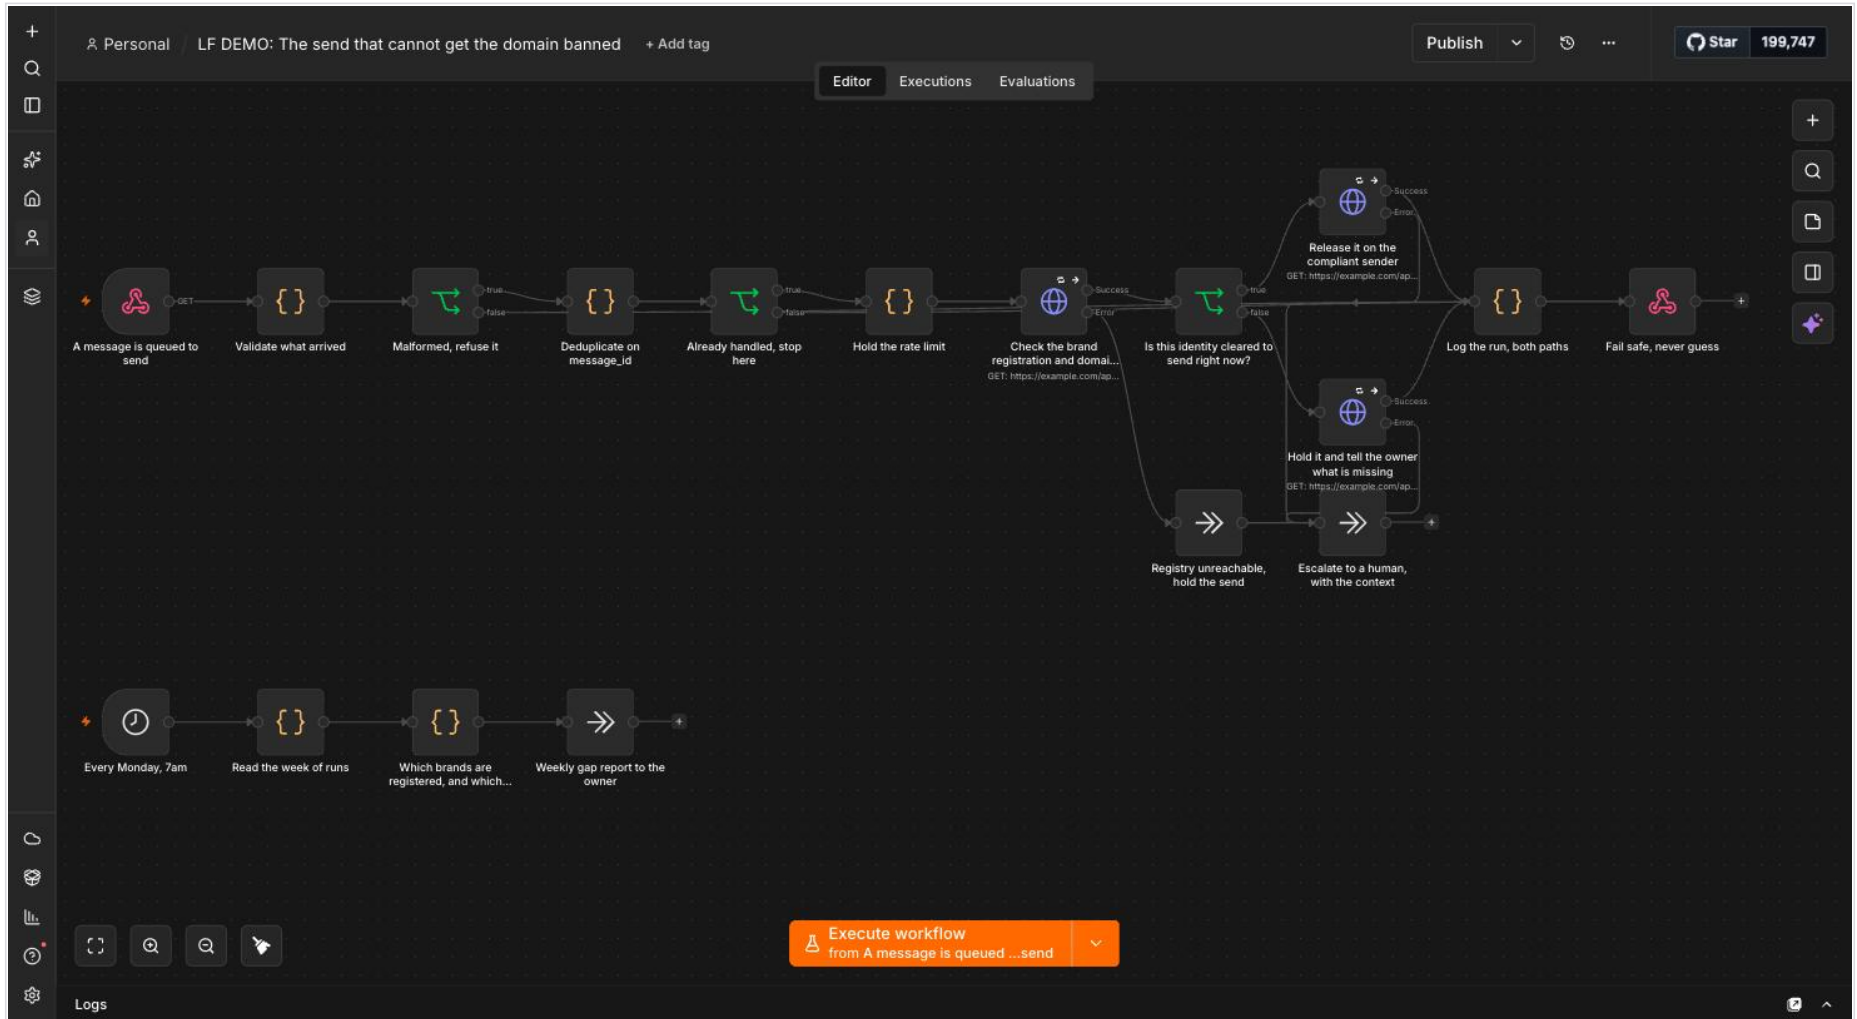

messaging-compliance · built in ghl

Messaging that isn't registered and authenticated doesn't get delivered, and nobody tells you — it just quietly stops arriving.

What it connects to: Registration lives with the carrier, the sending happens in the CRM, and neither tells the other when clearance lapses. Silence is the failure mode.

1 of 4 SYSTEM

Here's the system — nothing leaves until the sending identity has been checked against the registry.

2 of 4 THINKING

This is the gate: registered, and throughput left on the number. 10DLC filtering is silent, so if you don't check here you find out from the reply rate weeks later rather than from an error.

Is this identity cleared to send right now?

And the sending-domain setup — SPF, DKIM and DMARC — which is what keeps email out of spam.

The screenshot displays the 'Email Services' section of the Launch Forte application. The left sidebar contains navigation links for 'Settings' (My Business, Business Profile, My Profile, Billing, My Staff, Opportunities & Pipelines) and 'BUSINESS SERVICES' (Calendars, Email Services, Phone System, WhatsApp, OTHER SETTINGS, Objects, Custom Fields, Custom Values, Import Data, Manage Scoring). The main content area is titled 'Email Services' and includes tabs for 'SMTP Service', 'Reply & Forward Settings', 'Email Analytics', 'Risk Assessment', 'Bounce Classification', and 'Postmaster Tools'. The 'SMTP Service' tab is active, showing a 'Select Default Provider' section with 'LeadConnector Email System' (send.lcmgsndr.org) selected. A prominent modal window titled 'Important Notification: Boost Your Email Deliverability!' is overlaid, explaining the benefits of a dedicated sending domain. The modal text states: 'Currently you are using a shared sending domain for your email communications. While this is a convenient option, we would like to recommend a strategic enhancement to your email delivery process - creating your very own dedicated sending domain.' It lists four reasons to consider the upgrade: 1. **Enhanced Deliverability:** Emails are less likely to be affected by the reputation of other senders sharing the same domain. 2. **Brand Credibility:** A dedicated domain adds a professional touch and builds trust. 3. **Increased Control:** Managing your own domain allows for setting up authentication protocols like SPF, DKIM, and DMARC. 4. **Reduced Spam Flagging:** Shared domains can lead to higher spam-flagging rates, while a dedicated domain reduces the risk of legitimate emails being mistaken for spam. A blue button at the bottom of the modal says 'Create Dedicated Domain'.

Important Notification: Boost Your Email Deliverability!

Dedicated Sending Domain for Improved Email Delivery

Currently you are using a shared sending domain for your email communications. While this is a convenient option, we would like to recommend a strategic enhancement to your email delivery process - creating your very own dedicated sending domain.

Why should you consider this upgrade?

- Enhanced Deliverability:** With a dedicated sending domain, your emails are less likely to be affected by the reputation of other senders sharing the same domain. This means your important messages will have a better chance of reaching your recipients' inboxes
- Brand Credibility:** A dedicated sending domain adds a professional touch to your emails, reinforcing your brand identity and building trust with your recipients.
- Increased Control:** Managing your own sending domain gives you greater control over your email deliverability, allowing you to set up authentication protocols like SPF, DKIM, and DMARC to prevent unauthorized use of your domain.
- Reduced Spam Flagging:** Shared domains can sometimes lead to higher spam-flagging rates. By transitioning to your own sending domain, you reduce the risk of your legitimate emails being mistaken for spam.

Create Dedicated Domain

Dedicated Domain And IP

in can lead to several issues when it are some of the potential problems

may be caught in spam filters or ions of spam or phishing, as shared or mail reputation.
