

The Straight Answer Desk

ai-assistant · built in instantly

An assistant that guesses is worse than no assistant, because people stop trusting the answers and go back to phoning you.

What it connects to: The model is not the product. The knowledge source it is grounded in, and the CRM it hands off to, are the product — and both live outside the model.

1 of 4 SYSTEM

Here's the assistant — it answers from a real knowledge base and refuses when it doesn't know.

The refusal gate is the product. It hands to a human with the context attached rather than inventing something.

The screenshot shows a workflow editor interface. The top bar displays the step title "Is the answer actually grounded in a source?" with a green refresh icon on the left and a menu icon on the right. Below the title bar, there are two tabs: "Parameters" (selected) and "Settings". An orange "Execute step" button is located in the top right corner.

The main workspace is divided into two panels. The left panel, labeled "INPUT", shows a message: "No input data" with a globe icon and a button "Execute previous nodes" with the text "to view input data" below it. The right panel contains configuration options:

- Conditions:** A section with a text input field containing the JSON expression `{{ $json.grounded === true && $json.confidence > 0.75 }}`, a dropdown menu set to "is true", and a "+ Add condition" button.
- Convert types where required:** A toggle switch that is currently turned off, with a dropdown menu showing "Fixed" and "Expression".
- Options:** A section with a "+ Add option" button.

Running inside the tool, with the knowledge source it's actually trained on.

The screenshot shows a dark-themed user interface for configuring an AI agent. On the left is a vertical sidebar with icons for various functions, with the 'AI Agent Settings' icon highlighted. The main content area is titled 'Settings' and includes a subtitle 'Configure your AI agent's basic behavior and preferences'. Below this, there are three toggle switches, all of which are turned 'On': 'Agent should handle follow-ups?', 'Agent should respond to automatic and out-of-office emails?', and 'Handle objections, declines, or negative replies?'. Each toggle has an information icon to its right. Further down, a section titled 'No-Show Recovery' is marked with a 'New' badge. It includes a subtitle 'Automatically follow up with leads who miss scheduled meetings.' and a toggle switch for 'Enable No-Show Recovery', which is currently 'Off'. A mouse cursor is hovering over the 'Enable No-Show Recovery' toggle. Below the toggle is a 'How it works' section with a lightbulb icon, explaining that when enabled, the agent will follow up with leads assigned the 'No Show' label to help recover missed meetings. The top right of the interface features a 'Use New Experience' toggle, a gold coin icon with the number '150', a 'Get CRM' button, and a 'My Organization...' dropdown menu. A chat bubble icon is located in the bottom right corner.

No-Show Recovery New

Automatically follow up with leads who miss scheduled meetings.

Enable No-Show Recovery ⓘ Off ☐

How it works

When enabled, the agent will automatically follow up with leads that are assigned the "No Show" label, helping you recover missed meetings.
