

The Watch

alerting · built in make

Something breaks silently and the business hears it from a customer. That's the most expensive way to find out.

What it connects to: The thing that breaks and the thing that tells you are never the same system, and the watchdog must not depend on the system it is watching.

1 of 4 SYSTEM

Here's the watchdog, with the exact fix carried inside the alert rather than just the symptom.

2 of 4 THINKING

It's tested against a planted failure before it ever watches anything real — an alert nobody trusts gets muted.

The screenshot shows a workflow editor with a central node titled "Is it genuinely stalled, or just slow?". The node is configured with the following settings:

- Parameters:**
 - Conditions:** A single condition is defined: `{{ $json.stalled == true && $json.minutesSince > $json.threshold }}`. The status is "is true".
 - Options:** A toggle for "Convert types where required" is currently turned off.
- Buttons:** "Execute step" (orange), "Add condition", "Add option", "Execute previous nodes", and "Execute step" (in the output panel).

The interface is divided into three main panels:

- INPUT:** Displays "No input data" and a button "Execute previous nodes" to view input data.
- OUTPUT:** Displays "No output data" and a button "Execute step" to view output data.
- Bottom:** A "Logs" panel is visible at the bottom left, and a feedback prompt "I wish this node would..." is at the bottom center.

3 of 4 THEIR-WORLD

The alerting path in the CRM, escalating with context.

4 of 4 RESULT

And the precision check: how many alerts were actually real.

The screenshot displays a workflow editor interface. On the left is a purple sidebar with navigation icons and labels: Home, Org, Scenarios, AI Agents, Credentials, Webhooks, Templates, Data stores, Devices, and More. The main workspace shows a workflow diagram with a purple clock icon on the left and a blue globe icon on the right, connected by a line with three small circles in between. A 'Schedule settings' dialog box is open in the center, containing the following fields and options:

- Run scenario:** A dropdown menu currently set to 'At regular intervals'.
- Minutes:** A text input field containing the number '15'. Below it, a note states: 'Must be higher than or equal to 1.'
- Advanced scheduling:** A section with a link '+ Add more schedules'.
- Advanced settings:** A toggle switch that is currently turned off.

At the bottom of the dialog are 'Cancel' and 'Save' buttons. The background workflow diagram includes a step labeled 'HTTP' with a 'POST /api/alerts/pager' action. The top of the interface has a breadcrumb 'LF DEMO — The watchdog that is not part of what it watches' and buttons for 'Share' and 'Help'. The bottom of the interface features a control bar with a 'Run once' button, a 'Every 15 minutes' toggle, and various utility icons.
