

The Reconciliation Build

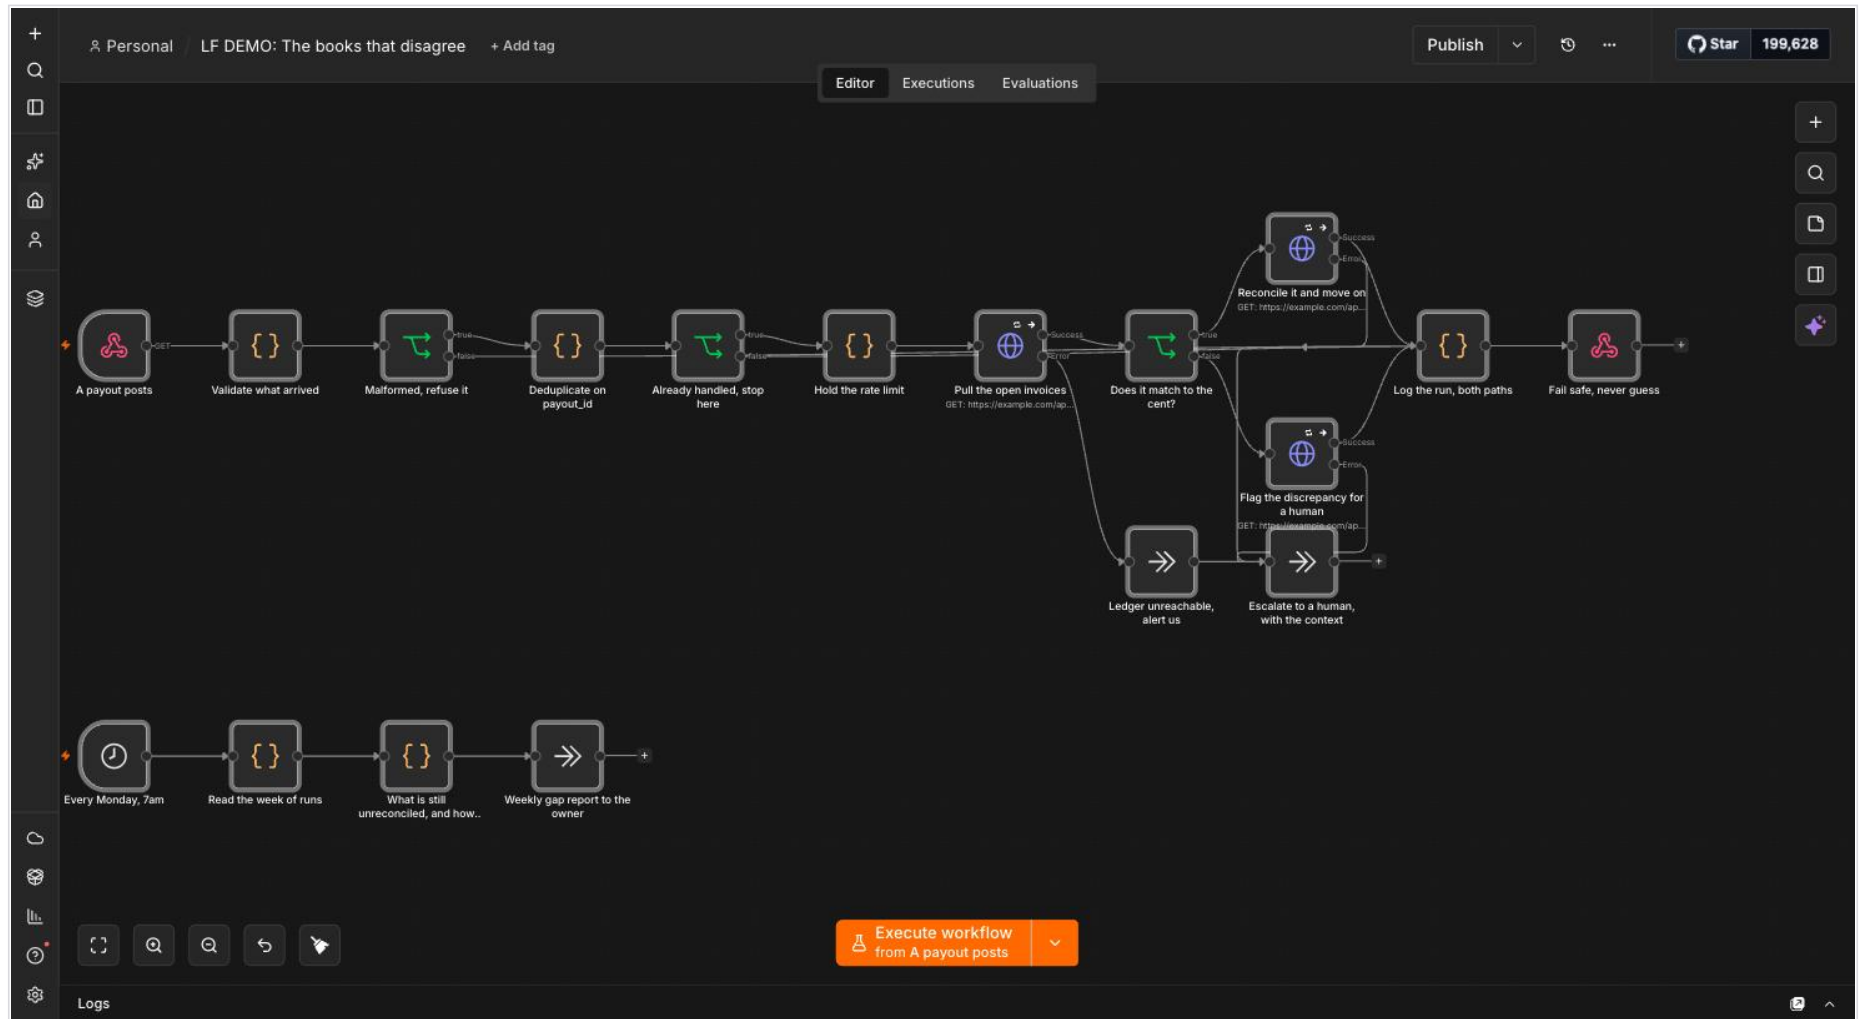

books-reconciliation · built in make

The hours don't go into the matching. They go into the handful of rows a human has to judge.

What it connects to: The payout processor and the ledger disagree by design — fees, timing, refunds. Reconciliation is not a report, it is a translation layer between two systems that count differently.

1 of 4 SYSTEM

Here's the system: payouts in, matched to the cent, and only the exceptions reach a person.

2 of 4 THINKING

This is what it reports weekly — what's still unreconciled and how old, because that's the number that turns into a month-end problem.

Does it match to the cent?

3 of 4 THEIR-WORLD

The same logic inside QuickBooks — a rule that encodes the ruling once instead of every week.

4 of 4 MORE

And the variance it's built to close: the ledger and the bank disagreeing, in one frame.
