

The Reconciliation Build

books-reconciliation · built in stripe

The hours don't go into the matching. They go into the handful of rows a human has to judge.

What it connects to: The payout processor and the ledger disagree by design — fees, timing, refunds. Reconciliation is not a report, it is a translation layer between two systems that count differently.

1 of 4 SYSTEM

Here's the system: payouts in, matched to the cent, and only the exceptions reach a person.

2 of 4 THINKING

This is what it reports weekly — what's still unreconciled and how old, because that's the number that turns into a month-end problem.

Does it match to the cent?
