

The Onboarding Build

client-onboarding · built in ghl

The first 48 hours set the tone for the whole engagement, and they're usually improvised.

What it connects to: Won in the CRM has to become tasks in the project tool, a folder somewhere, and an intake the client actually returns. Three systems, one moment.

1 of 4 SYSTEM

Here's what fires the moment a deal flips to Won — welcome, checklist, intake, escalation.

2 of 4 THINKING

It escalates if the intake hasn't come back by day two, rather than waiting for someone to notice.

The screenshot displays a workflow editor with a central configuration panel and two side panels labeled INPUT and OUTPUT.

Central Panel:

- Parameters:** The active tab. It contains a **Conditions** section with a single condition: `{{ $json.intakeReturned === true && $json.n.dayCount <= 2 }}`. A checkbox labeled **is true** is checked. Below the conditions is a toggle for **Convert types where required**, which is currently off. There are also **+ Add condition** and **+ Add option** buttons.
- Settings:** An inactive tab.
- Execute step:** An orange button in the top right corner of the central panel.

INPUT Panel (Left):

- Header: **INPUT**
- Content: A message "No input data" with a right-pointing arrow icon. Below it is a button labeled **Execute previous nodes** and the text "to view input data".

OUTPUT Panel (Right):

- Header: **OUTPUT**
- Content: A message "No output data" with a left-pointing arrow icon. Below it is a button labeled **Execute step** and the text "to view output data".

Footer:

- A **Logs** tab is visible at the bottom left.
- A feedback prompt at the bottom center reads: "I wish this node would..."

Running in the CRM, triggered on the status change rather than a stage drag.
