

The Outreach Engine

cold-outreach · built in instantly

Volume isn't the problem. Deliverability and reply handling are, and they're what nobody sets up properly.

What it connects to: The sequencer owns the send and the CRM owns the truth about whether that person is already a customer. Emailing an existing client is the mistake that costs the account.

1 of 4 SYSTEM

Here's the sending architecture — validated list, deduplicated, rate-limited to protect the domain.

The reply gate stops the sequence the moment someone answers.

Safe to send, and have they stayed quiet?

Conditions

fx

{{ \$json.deliverable === true && \$json.replied !== true && \$json.step <= 3 }}

is true

+ Add condition

☐ Convert types where required

FixedExpression

Options

+ Add option

Running in the tool, with the sending and consent configuration visible.

And the report: what's landing, what's bouncing, what replied.
