

The Intake System

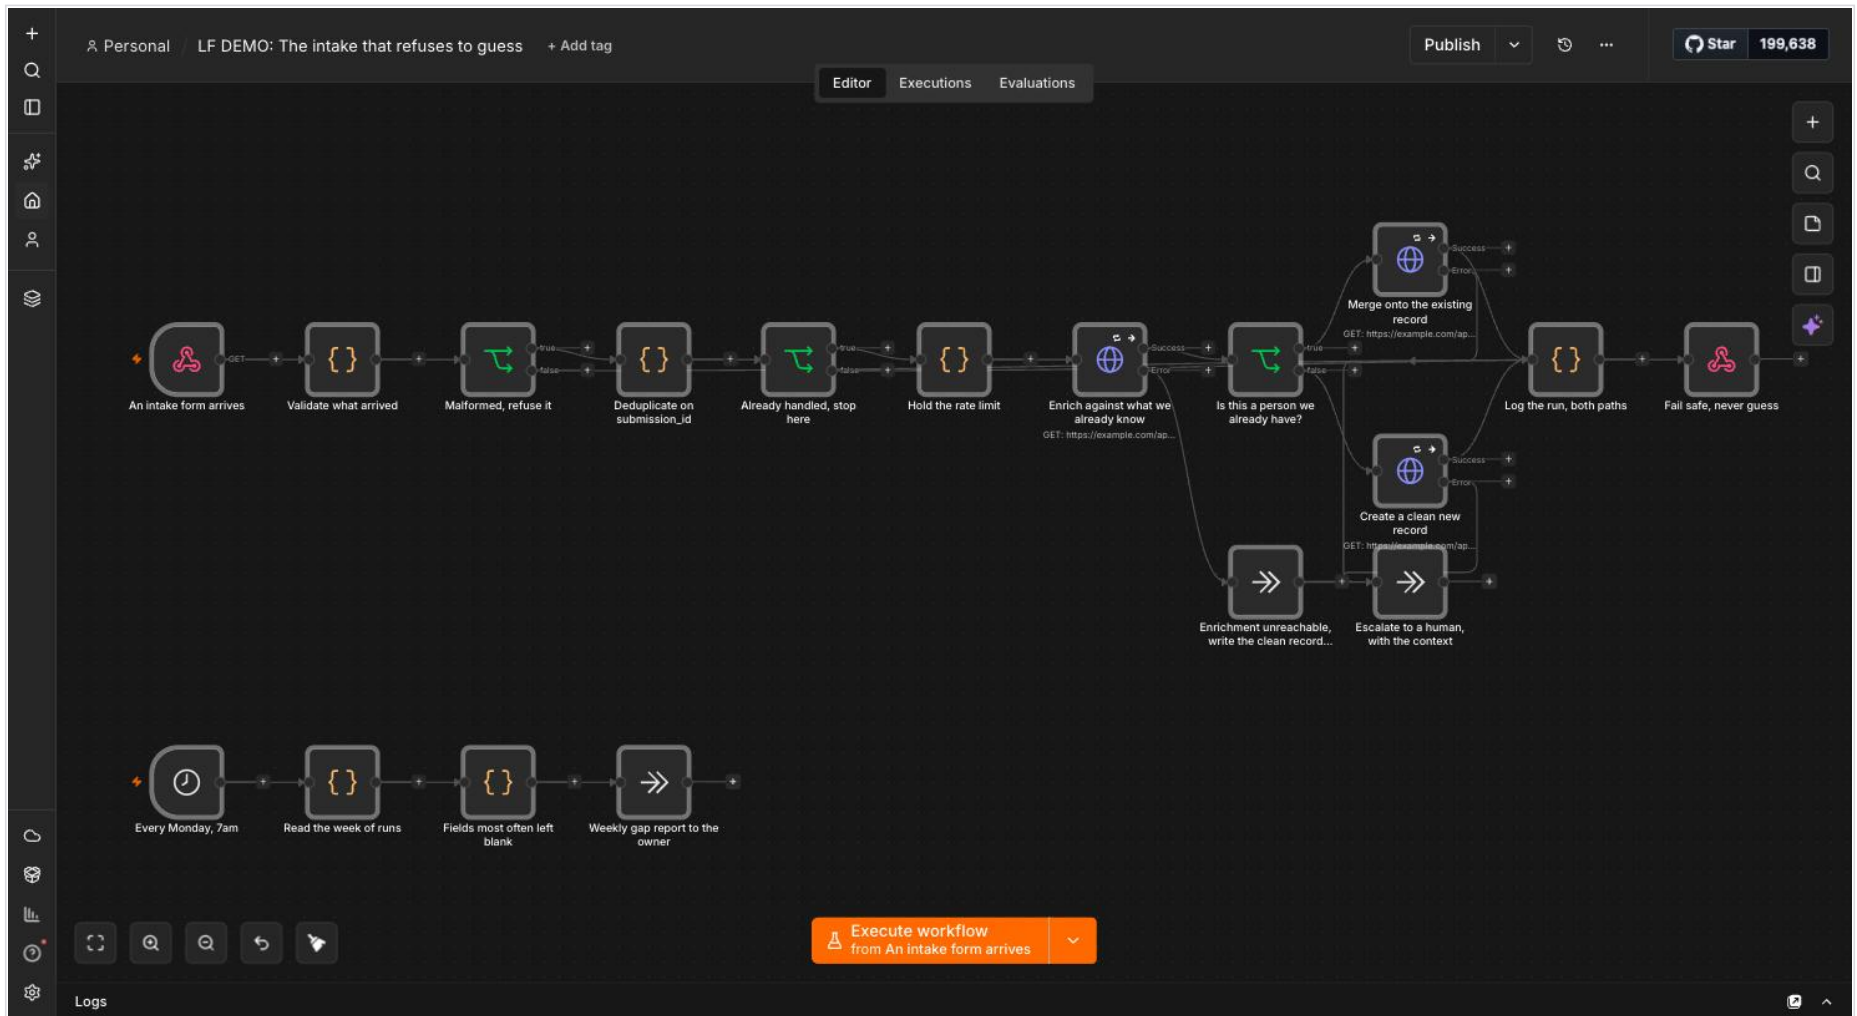

data-collection · built in google-sheets

A half-record in the CRM is worse than no record, because it looks complete.

What it connects to: The form and the system of record are almost never the same tool. Everything expensive happens in the gap: duplicates, half-records, and fields that mean different things on each side.

1 of 4 SYSTEM

Here's the intake spine: validate, refuse what's malformed, dedupe, then write a clean record.

2 of 4 THINKING

The validation gate is the part that matters — it refuses rather than guessing.

The screenshot displays a workflow editor interface with a dark theme. The main workspace is divided into three vertical panels: INPUT, PARAMETERS, and OUTPUT.

- INPUT Panel:** Contains the text "No input data" and a button labeled "Execute previous nodes" with the subtitle "to view input data".
- PARAMETERS Panel:** Features a tabbed interface with "Parameters" and "Settings" tabs. The "Parameters" tab is active, showing a "Conditions" section with a text area containing the JSON condition: `{{ $json.existing === true && $json.confidence > 0.8 }}`. To the right of the text area is a dropdown menu with "is true" selected. Below the conditions section is a toggle switch labeled "Convert types where required" which is currently turned off. At the bottom of the parameters section is an "Options" section with a "+ Add option" button.
- OUTPUT Panel:** Contains the text "No output data" and a button labeled "Execute step" with the subtitle "to view output data".

At the top of the workspace, there is a title bar with a green icon and the text "Is this a person we already have?". On the right side of the title bar are "Docs" and "X" icons. At the bottom of the workspace, there is a "Logs" panel and a status bar with the text "I wish this node would..." and a help icon.

3 of 4 THEIR-WORLD

The intake form itself, with real field types bound to CRM properties.

+ Intake Bulk Order Log

4 of 4 RESULT

And the records it produces, clean and deduplicated.

The screenshot shows the Google Apps Script editor interface. The title bar reads "Apps Script Job Intake and Bulk Order Aut...". On the right, there is a "Deploy" button and a user profile icon labeled "S". The left sidebar contains a "Files" panel with "Code.gs" selected, and "Libraries" and "Services" panels with plus signs. The main editor area displays a JavaScript script with line numbers 108 through 142. The script logic includes: a check for data rows; a deduplication pass based on Job ID; and a grouping pass by Supplier/Service. A warning log event is triggered when no data is present.

```
108
109
110 var lastRow = intake.getLastRow();
111 if (lastRow < 2) {
112   logEvent('WARN', 'rebuildBulkOrder', 'Intake has no data rows - nothing to do.');
```

```
113   return { rows: 0 };
114 }
115
116 var data = intake.getRange(2, 1, lastRow - 1, COL.DATE).getValues();
117
118 // --- Pass 1: de-duplicate by Job ID -----
119 var seen = {}; // jobId -> true
120 var unique = []; // rows that survive
121 var duplicates = 0;
122 var skipped = 0;
123
124 for (var i = 0; i < data.length; i++) {
125   var row = data[i];
126   var jobId = String(row[COL.JOB_ID - 1]).trim();
127
128   // Incomplete rows never reach a purchase order - validateIntake()
129   // is what tells the user about them.
130   if (!jobId || !isRowComplete_(row)) { skipped++; continue; }
131
132   if (seen[jobId]) { duplicates++; continue; } // <-- dedupe
133   seen[jobId] = true;
134   unique.push(row);
135 }
136
137 // --- Pass 2: group + sum by Supplier / Service -----
138 var groups = {}; // key -> aggregate
139 var order = []; // preserves first-seen ordering
140
141 for (var j = 0; j < unique.length; j++) {
142   var r = unique[j];
143   var supplier = r[COL.SUPPLIER - 1];
144   var service = r[COL.SERVICE - 1];
```
