

The Lead Router

lead-routing · built in hubspot

Five minutes is the whole game. A lead that waits an hour is worth a fraction of one answered fast.

What it connects to: The form is in one system, the owner roster in another, and the SLA clock in neither. The clock is the integration.

1 of 4 SYSTEM

Here's the routing system end to end — score, assign, contact, and escalate on silence.

2 of 4 THINKING

The part most builds miss is the SLA timer: this reassigns when the first owner doesn't touch it.

Is this one worth the fast lane?
