

The Lead Router

lead-routing · built in zapier

Five minutes is the whole game. A lead that waits an hour is worth a fraction of one answered fast.

What it connects to: The form is in one system, the owner roster in another, and the SLA clock in neither. The clock is the integration.

1 of 4 SYSTEM

Here's the routing system end to end — score, assign, contact, and escalate on silence.

2 of 4 THINKING

The part most builds miss is the SLA timer: this reassigns when the first owner doesn't touch it.

 Is this one worth the fast lane?

3 of 4 THEIR-WORLD

Same pattern running inside a real CRM, with the merge fields and the branch on lead source.

The screenshot displays the Zapier workflow editor interface. At the top, the header shows 'Zap workflows' and the current workflow is 'Untitled Zap' in 'Draft' status. A notification banner states 'Copilot can fully configure your workflow' with a 'Build it' button. The main workspace shows a vertical sequence of steps: '1. Catch Hook' (Webhooks by Zapier) and '2. Filter conditions' (Filter by Zapier). The 'Filter by Zapier' step is expanded, revealing its configuration panel on the right. This panel is divided into 'Setup' and 'Configure & test' tabs. Under 'Configure & test', there are two rule groups. The first group, 'Only continue if', contains a rule where '1. Status' '(Text) Exactly matches' the value 'qualified'. The second group, 'And', contains a rule where '1. Lead Score' '(Number) Greater than' the value '50'. Below these rules, there is a green success message: 'Your zap would have continued. If your Zap did not continue as expected, [edit your filter below](#) and retest.' A 'Continue' button is at the bottom of the configuration panel. The bottom of the editor shows a 'Library' section and a version number 'ver. v2026-08-07T11:36-19111377'.
