

The Deliverability Build

messaging-compliance · built in instantly

Messaging that isn't registered and authenticated doesn't get delivered, and nobody tells you — it just quietly stops arriving.

What it connects to: Registration lives with the carrier, the sending happens in the CRM, and neither tells the other when clearance lapses. Silence is the failure mode.

1 of 4 SYSTEM

Here's the system — nothing leaves until the sending identity has been checked against the registry.

2 of 4 THINKING

This is the gate: registered, and throughput left on the number. 10DLC filtering is silent, so if you don't check here you find out from the reply rate weeks later rather than from an error.

Is this identity cleared to send right now?

3 of 4 THEIR-WORLD

Here's the A2P 10DLC registration path, including the status screen where rejections actually surface.

4 of 4 RESULT

And the sending-domain setup — SPF, DKIM and DMARC — which is what keeps email out of spam.

The screenshot displays the 'Launch Audit Outreach' settings interface. At the top, there's a navigation bar with a back arrow, the title 'SAMPLE - Launch Audit Outreach', and options for 'Use New Experience' (a toggle), a balance of '150', a 'Get CRM' button, and a 'My Organization...' dropdown. A vertical sidebar on the left contains icons for different features. The main content area is divided into several sections:

- Max new leads:** A section with a 'No limit' button and the text 'per day'.
- Prioritize New Leads:** A section with a checkbox labeled 'Prioritize reaching out to new leads over scheduled follow-ups'.
- Auto optimize A/Z Testing:** A section explaining that the algorithm will select the best performing variant. It includes a 'Choose winning metric' dropdown menu currently set to 'Select...'.
- Provider Matching:** A section explaining that it matches lead email providers with mailbox providers for boosted deliverability. It includes a checkbox labeled 'Enable provider matching for deliverability boost'.
- ESP Routing:** A section with a 'New' badge, explaining that it creates rules to control email sending based on sender and recipient email service providers. It features a '+ Add custom rule' button.

A mouse cursor is visible over the 'Provider Matching' section. In the bottom right corner, there is a blue circular chat icon.
