

The Follow Up

quote-follow-up · built in ghl

Following up on a quote is nobody's actual job, so it quietly becomes nobody's.

What it connects to: The quote lives in the CRM and the reply lands in a mailbox. Stopping the cadence means the mailbox has to be able to reach back into the CRM.

1 of 4 SYSTEM

Here's the cadence — day 2, day 5, day 9, then nurture.

2 of 4 THINKING

Every touch checks for a reply first and stops dead the moment they answer. That gate is what separates follow-up from nagging.

Have they replied since the last touch?

3 of 4 THEIR-WORLD

The same cadence inside the CRM, with the real message copy.

The screenshot displays the Salesforce Workflow Builder interface for a workflow named "SAMPLE - Quote Follow Up Cadence".

Workflow Builder Canvas:

- Trigger:** "Pipeline stage changed" (Quote sent (moved to Prop...)). It includes a condition "In pipeline is 'Marketing Pipeline'".
- Action:** "Day 2 - wait 2 days".
- Action:** "Email".

Right Sidebar (Create email configuration):

- Create email:** "Quick compose" is selected. "From smart builder" and "Select existing template" are also visible.
- Type your message:** The message body is "Hi {{contact.first_name}}, following up on the quote we sent. Happy to walk through the line items or adjust scope if the number is off. Just reply and let me know. (SAMPLE - demo only)".
- Formatting:** The text is in Verdana font, 16px size, with a paragraph style and 1.5 line spacing.
- Character Count:** 185 characters | 34 words.
- Additional settings:** A section for further configuration is visible at the bottom.

And what it reports: which quotes are unanswered and how old.
