

The Reporting Layer

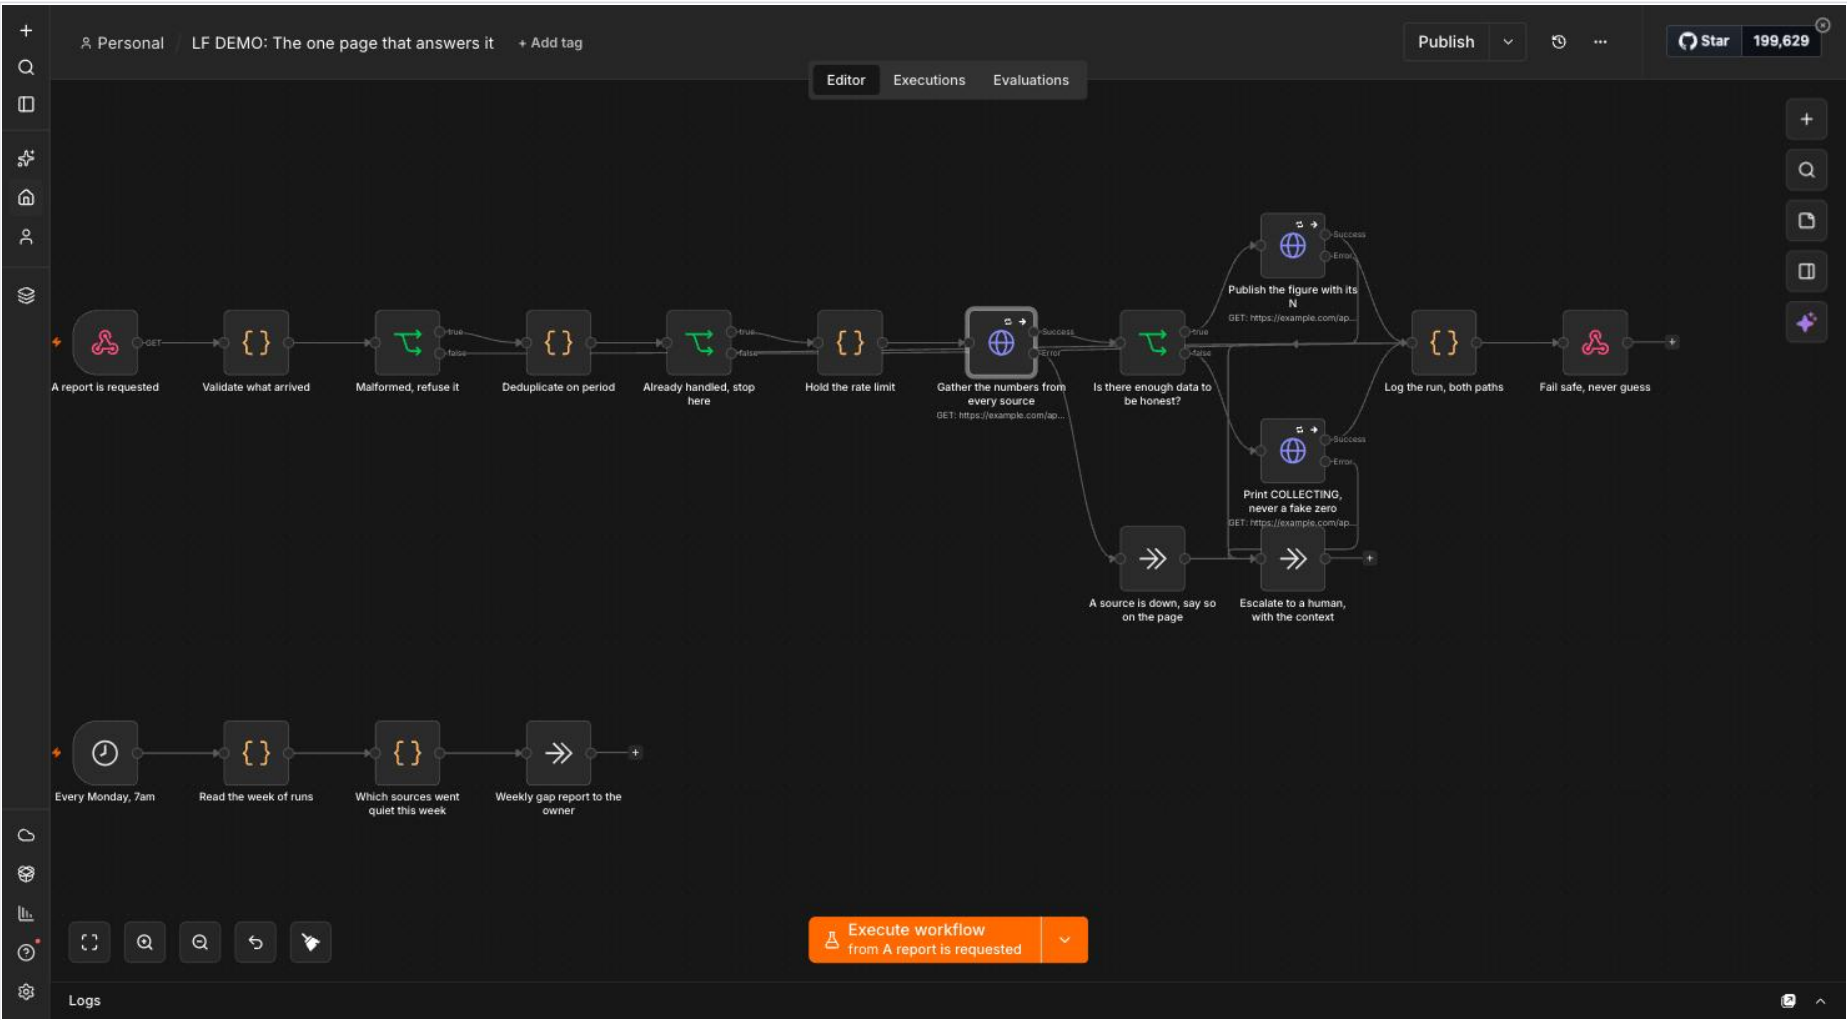

reporting · built in google-sheets

Most dashboards lie by omission. A zero that means 'unknown' looks exactly like a zero that means zero.

What it connects to: Every source counts a lead slightly differently. The reporting layer is where you decide, once and in writing, whose definition wins.

1 of 4 SYSTEM

Here's the system that gathers from every source and only publishes once there's enough data to be honest.

2 of 4 THINKING

Below the threshold it prints COLLECTING rather than a number that reads as fact.

 Is there enough data to be honest?

INPUT

ParametersSettings

Execute step

Conditions

fx

`{{ $json.n >= 30 && $json.sourcesRead == $json.sourcesExpected }}`

+ Add condition

☐ is true

Convert types where required

Options

+ Add option

→|

3 of 4 THEIR-WORLD

The reporting layer running live on real records.

+ ≡ Intake Bulk Order Log

<

4 of 4 RESULT

And the same layer on a second stack — the numbers move, the structure does not.

The screenshot shows the Google Apps Script editor interface. The top bar includes the Google logo, the text "Apps Script", the file name "Job Intake and Bulk Order Aut...", and a "Deploy" button. Below the top bar is a sidebar with icons for Files, Libraries, and Services. The main editor area displays a JavaScript file named "Code.gs" with the following code:

```
129 if (!jobId || !isRowComplete_(row)) { skipped++; continue; }
130
131 if (seen[jobId]) { duplicates++; continue; } // <-- dedupe
132 seen[jobId] = true;
133 unique.push(row);
134 }
135
136 // --- Pass 2: group + sum by Supplier / Service -----
137 var groups = {}; // key -> aggregate
138 var order = []; // preserves first-seen ordering
139
140 for (var j = 0; j < unique.length; j++) {
141   var r = unique[j];
142   var service = String(r[COL.SERVICE - 1]).trim();
143   var supplier = SERVICE_SUPPLIER[service] || 'UNMAPPED - review';
144   var qty = Number(r[COL.QTY - 1]) || 0;
145   var total = qty * (Number(r[COL.UNIT_PRICE - 1]) || 0);
146   var key = supplier + '||' + service;
147
148   if (!groups[key]) {
149     groups[key] = { supplier: supplier, service: service,
150                   qty: 0, total: 0, jobs: 0 };
151     order.push(key);
152   }
153   groups[key].qty += qty;
154   groups[key].total += total;
155   groups[key].jobs += 1;
156 }
157
158 // --- Pass 3: write -----
159 var out = order.map(function (key) {
160   var g = groups[key];
161   return [g.supplier, g.service, g.qty, g.jobs, g.total,
162         g.qty ? g.total / g.qty : 0];
163 });
```
