

The Booking System

scheduling · built in ghl

Confirmation is the easy half. The money is in what happens when someone doesn't turn up.

What it connects to: The calendar owns the slot, the messaging system owns the reminder, and the no-show recovery has to survive both. A reschedule that only updates one side is the classic failure.

1 of 4 SYSTEM

Here's the full sequence — confirm, remind twice, and branch on attendance.

2 of 4 THINKING

This is the no-show recovery path, which is the part that pays for the build.

4 of 4 RESULT

And the reminder cadence timed against the appointment rather than a fixed delay.

The screenshot displays the Salesforce Workflow Builder interface for a workflow named "SAMPLE - Appointment Booked: Reminder Sequence". The interface includes a top navigation bar with "Workflows list", "Standard builder", and tabs for "Builder", "Settings", "Enrollment history", and "Execution logs". On the right, there are buttons for "Test workflow", "Draft", and "Publish", along with a "Save" button.

The main workspace shows a workflow diagram on a grid. The workflow starts with a trigger box labeled "Customer booked appoint..." with the condition "Contact Mode is any of 'contact'". This is followed by a junction point, then a "Booking confirmati SMS" action box, and finally a "Wait" action box. A dashed box labeled "+ Add new trigger" is positioned next to the trigger box.

On the right side, a configuration panel for the "Until a scheduled date/time" trigger is visible. It includes the following options:

- What type?**
 - ☒ Appointment / calendar event
 - ☐ Rental booking
 - ☐ Invoice due date
- ☐ Using appointment from workflow trigger: "Customer booked an appointment"
- When should the contact proceed?**
 - ☐ At the scheduled time
 - ☒ Before
 - months: 0, days: 1, hours: 0, minutes: 0
 - Contact will proceed **1 day before** the scheduled time.
 - ☐ After
- If this date has already passed**
 - ☐ Continue to next action

At the bottom of the configuration panel are "Cancel" and "Save action" buttons.
