

The Booking System

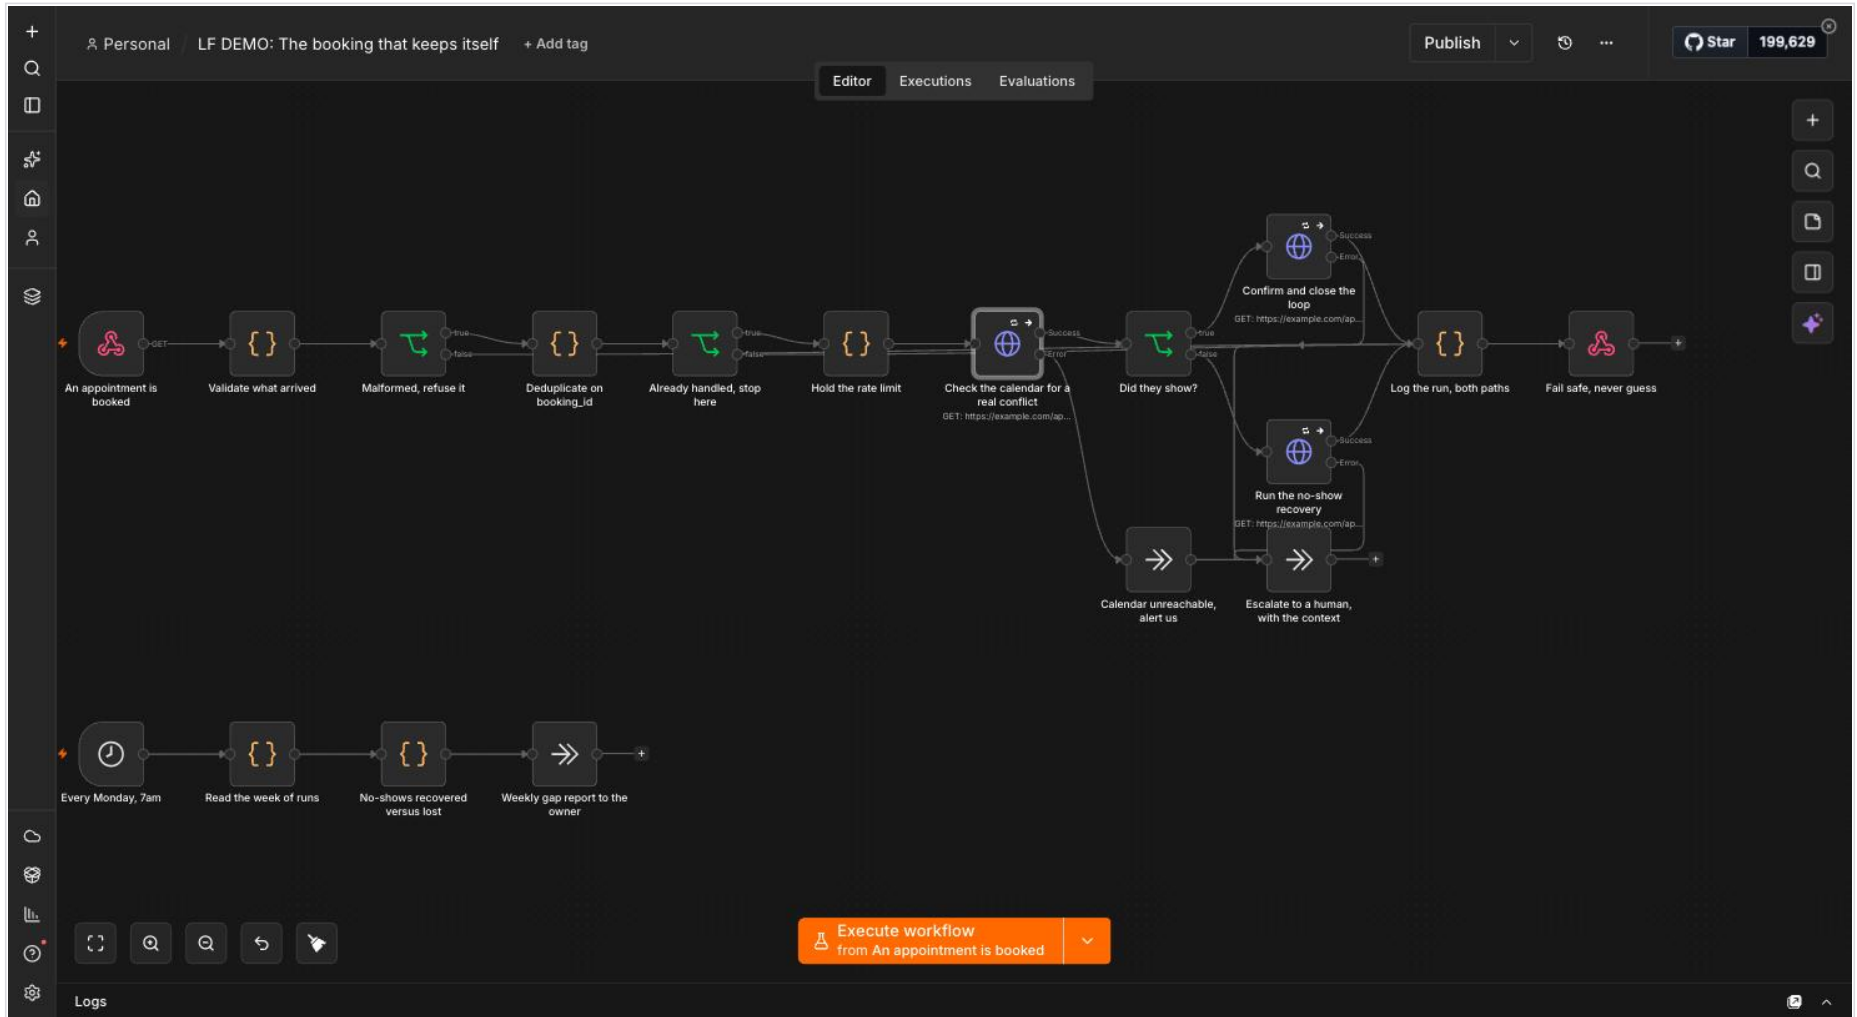

scheduling · built in google-sheets

Confirmation is the easy half. The money is in what happens when someone doesn't turn up.

What it connects to: The calendar owns the slot, the messaging system owns the reminder, and the no-show recovery has to survive both. A reschedule that only updates one side is the classic failure.

1 of 4 SYSTEM

Here's the full sequence — confirm, remind twice, and branch on attendance.

2 of 4 THINKING

This is the no-show recovery path, which is the part that pays for the build.

Did they show?

Conditions

fx

{{ \$json.attended === true || \$json.rescheduled === true }}

is true

+ Add condition

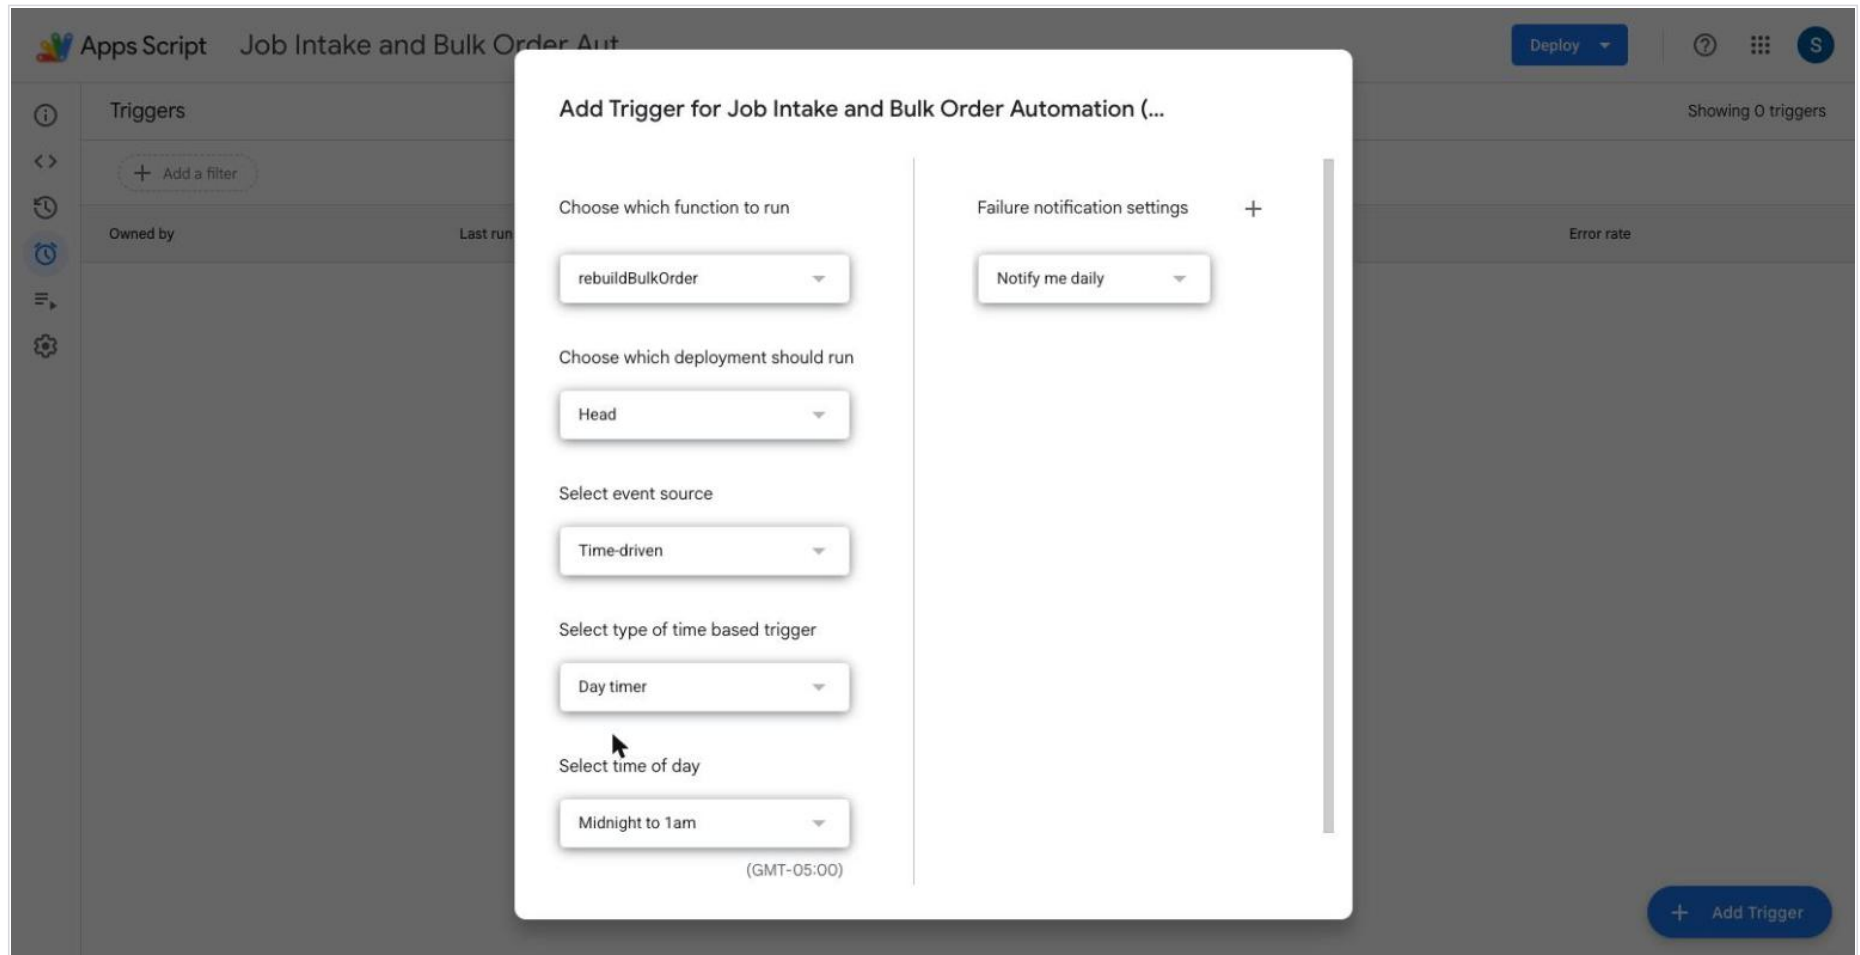

☐ Convert types where required

Options

+ Add option

3 of 4 THEIR-WORLD

The same pattern inside a real booking system, with availability and buffers configured.

4 of 4 RESULT

And the reminder cadence timed against the appointment rather than a fixed delay.
