

The Sync Build

system-sync · built in zapier

Two systems disagreeing about the same customer is how a CRM quietly stops being trusted.

What it connects to: This pattern IS the seam. Two systems, one record, and an echo gate so our own write coming back does not start a loop at 3am.

1 of 4 SYSTEM

Here's the two-way sync, with the echo gate that stops it looping at 3am.

2 of 4 THINKING

This is the node that checks whether the change coming back is our own write. Most builds are missing it.

The screenshot shows a workflow editor interface for a node titled "Is this our own echo coming back?". The node is configured with the following settings:

- Parameters:** The "Conditions" section contains a single condition with the following JSON expression:

```
{{ $json.isEcho !== true && $json.remoteUpdatedAt < $json.localUpdatedAt }}
```

. The condition is set to "is true".
- Settings:** The "Convert types where required" toggle is turned on.
- Options:** The "Options" section is currently empty, with a "+ Add option" button available.

The left sidebar of the editor shows the "INPUT" section and a green arrow icon pointing right.

3 of 4 THEIR-WORLD

The integration layer in place on a live stack.

And the connectors it reconciles across.
