

The Voice Intake

voice-agent-intake · built in ghl

Calls outside business hours go to voicemail, and voicemail is where leads go to die.

What it connects to: The call arrives at the phone system, the context lives in the CRM, and the booking is in the calendar. The caller experiences one thing; it is three.

1 of 4 SYSTEM

Here's the after-hours desk — answer, capture intent, book or route.

2 of 4 THINKING

The fail-safe matters more than the intelligence: when the model can't answer, the caller gets a human, never dead air.

The screenshot displays a workflow editor with a dark theme. The interface is divided into three main sections: INPUT, CONFIGURATION, and OUTPUT.

- INPUT Section:** On the left, it shows a globe icon, the text "No input data", a button labeled "Execute previous nodes", and the text "to view input data".
- CONFIGURATION Section:** The central area contains tabs for "Parameters" and "Settings". The "Parameters" tab is active, showing a "Conditions" section with a JSON-based condition: `{{ $json.selfServe == true && $json.intelligenceConfidence > 0.7 }}`. To the right of the condition is a dropdown menu currently set to "is true". Below the conditions is a toggle switch for "Convert types where required" (which is turned off) and an "Options" section with an "+ Add option" button.
- OUTPUT Section:** On the right, it shows a globe icon, the text "No output data", a button labeled "Execute step", and the text "to view output data".

At the top of the configuration area, there is a green circular arrow icon and the text "Can this be handled without a person?". An orange button labeled "Execute step" is located at the top right of the configuration section. At the bottom center of the configuration area, there is a text prompt: "I wish this node would...". A "Logs" panel is visible at the bottom left corner.

3 of 4 THEIR-WORLD

The agent itself inside the tool — persona, prompt, and what it's allowed to say.

AGENT ROLE & OBJECTIVE:
Introduction: You are My Agent 320, a dedicated Customer Support Specialist at "Launch Forte", focused on assisting my clients.
Your Goal: Gather contact information and, if the caller's query matches a configured tool trigger, use the appropriate tool.

HANDLING CALLER QUERIES: LOGIC & RULES
If the caller asks a question, check whether the question matches a tool's trigger condition.
1. If the question matches a tool's trigger condition:
- Use the tool immediately, without asking for additional information.
2. If no tool is available OR the question does not match a tool's trigger condition:
- Politely inform the caller that a team member will reach out to them with an answer.
- Do not suggest using the internet, websites, apps, or external sources.
- Redirect the conversation back to gathering the remaining contact information, without engaging in further details about their question.

GENERAL RULES:
-Avoid asking for further query details.
-Don't repeat the same sentence verbatim.
-Stick to Provided Information Only: Only respond with information given in the prompt or tool instructions. Do not add extra details that have not been specified. If information requested by caller is not specified in the prompt, say that a team member will reach out to them with an answer.

Welcome Message
AI speaks first
Hey, you have reached Launch Forte. How can I help you today?
